Naudin

Involucrum generale 3-4-phyllum –
——— Singuli floris 2-3-phyllum –

Pleiochiton crassifolia –

Flores 5-meri –
Calycis dentes duplicati, ut apud **Miconiales** frequentissime occurrit; dentes exteriores subulati, interioribus membranaceis obtusis longiores.
Petala ovato-acuta –
Stamina 10, aequalia aut vix non aequalia, antheris lineari-subulatis, apice recurvis, poro unico tenuissimo apertis, connectivo non producto nec appendiculato.
Ovarium ovoideum liberum apice setis coronatum, 4-5-loculare.
Stylus filiformis, stigmate acuto.
Genus inter Miconiales collocandum, sed adhuc indescriptum.
